

WASTE WATER TREATMENT PLANTS

PRIVATE “OFF MAINS” WASTE WATER TREATMENT

- **PACKAGED SEWAGE TREATMENT PLANTS**
- **SEPTIC TANKS**
- **CESSPOOLS**
- **TRENCHLESS DRAINAGE TECHNIQUES**

Many domestic and commercial properties are not serviced or have direct access to a main sewer. Therefore, an effective on site method of dealing with domestic waste will be required. CRB Services can offer complete project management, from initial site survey, including CCTV survey, which determines the best product selection, liaising with the Environment Agency to obtain the correct discharge licence, to the supply and installation of the complete system including all drainage, electrical and commissioning works.

PUMPING STATIONS

PUMP STATIONS

- **SINGLE DOMESTIC SEWAGE PUMPING STATIONS**
- **TWIN DOMESTIC & COMMERCIAL PUMPING STATIONS**
- **INSTALLATION OF RISING MAIN WITHOUT THE NEED FOR EXCAVATION**

If you have a main sewer available that cannot be reached by a gravity discharge, CRB Services can provide a range of single and twin pumping stations to overcome the problem. The pumping station is installed below ground to receive the waste under a gravity flow and then pumped to the point of the nearest sewer connection. This pipe can be installed by traditional excavation means or by incorporating one of our Trenchless Technology methods such as 'Multi Drill' which results in the installation of the pipe without disturbing the surface. This means that driveways, roads etc. can be crossed without closure and gardens will not be spoilt as a result.
